**Comments/Message:**

The attached sketch shows the locations of the boats. The two Sesko boats are on cribs on the beach. The boat nearest the crane has a sling wrapped around it that is attached to the crane. The sailboat is sketched in at its approximate location. It is on cribs. The three abandoned boats rest on the beach.

It appears that the crane is being used as a secondary anchor for the float and ship. The primary anchor is attached to some small concrete blocks that could fail in a strong south wind. A failure could result in the ship and float causing significant damage to the neighboring marina or other structures. At this time we would suggest that the crane not be removed until the float and ship are removed.

This fax will be considered valid if sent to our office via United States Mail or the telephone responsible for its transmission, via facsimile (360-377-0014), or Internet or original document via a Postal Service. Thank you.
